

ACO odour proof gully cover

Introduction

ACO odour proof gully cover hermetically separates the floor surface above the gully from the space within it. It has been designed specifically for use in hygienically sensitive areas where dry processing and controlled wet cleaning take place, and in areas where foul air traps have become dry and so a new form of odour protection is required.

Enabling users to seal a gully which is no longer in use, the gully cover can subsequently be replaced with a grating, if the end user wishes to change how the building is used and re-use the drainage system.

Product information

- Made from stainless steel grade 1.4404 (AISI 316)
- Tested and certified according to EN 1253
- Slip-resistant according to DIN 51130
- Available for all ACO gully top sizes

Technical details

Material (stainless steel)	1.4404 (AISI 316)
Sealing rubber material	TPEV
Available for gully top sizes	200 x 200 mm
	250 x 250 mm
	300 x 300 mm
Load class availability	R 50, M 125 (EN 1253)
Slip resistance	R10
